

Abstract

SP 17 >

5 A refrigerator cabinet assembly is disclosed. The refrigerator cabinet assembly has an outer case including two laterally spaced side walls and a top wall interconnecting the two side walls. Each of the side walls and the top wall is provided with front face portions and rear face portions. The structural strength of the outer case is increased by a plurality of reinforcing members.

10 (Said) plurality of reinforcing members are secured to the outer case by, e.g., self-drilling screws. The refrigerator cabinet assembly is devoid of welded portion.
